

CONFIDENTIAL

GERMAN DELEGATION

MOGOM DOC. 3832

Paris, December 18, 1959

MEMORANDUM BY THE GERMAN DELEGATION
ON THE EXPORT OF CARRIER FREQUENCY
INSTALLMENTS TO BULGARIA

The German authorities have received an application to license the delivery to Bulgaria of a

12 channel carrier frequency installation Z 12 N,
consisting of 2 terminal stations and 5 intermediate stations,
valued at appr. \$25,000.--,
covered by item 1523a

The above equipment is intended in connection with the electrification of the railway line between Plovdiv and Sofia (for which, with Doc. 3722 the necessary railway signalling cables were requested). It will be installed on the above mentioned railway line under the supervision of German engineers, which guarantees the enduse as well as the locality of the installment. The equipment is suited for a transmission (both directions) of 12 channels only. The upper frequency limit is ~~108~~ 108 kc/s. An addition of more channels is not possible; furthermore the Z 12 N system cannot be fixed on coaxial cables.

The German delegation wants to emphasize that this request complies with all the points brought forward by the US delegation during the discussion of item 1523.

Since a clarification of this item cannot be expected before the middle of January, the German delegation submit the request - being rather urgent - as an ad hoc-case and would be glad to have the Committee's view as soon as possible.
